- 🏠 8:00 am – 5:00 pm
- 🏠 Ramada Hotel, 1301 W Russell St. Sioux Falls, SD
- 🏠 Earns Contractor Continuing Education Credits
- 🏠 Earns Architect Continuing Education Credits

## COURSE DESCRIPTION...

Designing high performance commercial buildings will cost 10% – 25% more to build than conventional buildings – right? Adam Cohen of Passiv Science has been designing and building Passive House Commercial Buildings at costs comparable to typical new construction and is achieving Passive House level results. This workshop will explain the basics of Passive House design principles specific to Commercial Buildings. It will then go into the details of how Multifamily buildings can be built at market rate while achieving Passive House standards. Integrated Project Management will be discussed as will details, equipment, controls and areas for capturing money typically left on the table in conventional design-bid-build project delivery situations.

## TAUGHT BY ADAM COHEN OF PASSIVE SCIENCE

As an active designer/builder and green building expert, Adam Cohen is a leading North American Passivhaus practitioner whose innovative work on market-rate delivery of commercial high-performance building has made his work known for projects across North America. He has presented technical papers at both national and international Passivhaus conferences. His leadership in commercial Passivhaus design has made him a sought-after speaker, consultant, and teacher of advanced courses in Passivhaus ultra-low-energy design.
