

WHEN YOUR NEW HOME ARRIVES

- Check for exterior damage
- Hot Water Heater:
 - Locked disconnect is located beside water heater & the 30A breaker is located and labeled in electrical panel
 - Fill with water before turning on disconnect and setting breaker
 - If water heater remains in this closet AND you have a basement with a bathroom in it, you will need to install a vacuum relief valve for this water heater per the state plumbing code, if the water heater is moved into the basement OR you do not have a basement, a vacuum relief valve is NOT needed
- Check and fill P-Trap by the furnace with 1 quart of water as soon as sewer is connected
- Install Batteries in Smoke Detectors
 - Hallway
 - Crawl Space
 - Bedrooms
- Install Batteries in Thermostat
- If you have any questions, call 800-540-4241
- If you have a repair that needs to be made:
 - Contact your Sales Representative and explain the problem
 - Fill out and send in the House Repair Work Order form enclosed in this packet with your information and what is to be repaired
 - Have the repair personnel fill out their portion of the form
